

Task 03: UI Clone Challenge

Internship Domain: Frontend Development

Intern Name: Manu Kumar

Task Number: 03

Task Title: UI Clone Challenge

Submission Date: February 10, 2026

(A) Project Link:

- **GitHub Repository:** <https://github.com/HADESOO7/YT-clone/tree/main>
- **Live Hosted Link:** <https://hadesoo7.github.io/YT-clone/>

(B) Project Overview:

Objective: To replicate the core user interface of YouTube, focusing on a responsive grid layout, semantic HTML structure, and modern CSS styling. The application mimics the familiar header, sidebar navigation, category pills, and dynamic video grid.

Key Features:

- **Responsive Layout:** A flexible sidebar and grid system that adapts to different screen sizes.
- **Semantic Structure:** Uses <header>, <nav>, and <main> for accessibility and SEO best practices.
- **Dynamic UI:** Includes interactive elements like category filters and hover effects on video cards.
- **Icon Integration:** Utilizes FontAwesome for scalable vector icons throughout the interface.

(C) Implementation Details & Code Snippets

1. HTML Structure (Semantic Layout) The application is built on a semantic foundation, separating the navigation, header, and main content areas for better maintainability.

```
4      <meta charset="UTF-8" />
5      <meta name="viewport" content="width=device-width, initial-scale=1.0" />
6      <title>YouTube Clone</title>
7      <link
8          href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.0.0/css/all.min.css"
9          rel="stylesheet"
10     />
11     <link rel="stylesheet" href="styles.css" />
12 </head>
13 <body>
14     <header class="header">
15         <div class="header__left">
16             <div class="header__menu">
17                 <i class="fas fa-bars"></i>
18             </div>
19             <div class="header__logo">
20                 
25             </div>
26         </div>
27
28         <div class="header__search">
29             <form class="search-bar">
30                 <input type="text" class="search-input" placeholder="Search" />
31                 <button class="search-btn">
32                     <i class="fas fa-search"></i>
33                 </button>
34             </form>
35         </div>
36     </header>
```

2. JavaScript (Dynamic Content Generation): The script dynamically generates video cards, simulating fetching data from an API.

```
39     id: 5,
40     thumbnail: 'images/thumbnail.jpg',
41     duration: '7:15',
42     title: 'Amazing Video Title 5',
43     channel: 'Channel Name 5',
44     views: '1.5M',
45     uploadTime: '1 week ago',
46   },
47   {
48     id: 6,
49     thumbnail: 'images/thumbnail2.jpg',
50     duration: '6:40',
51     title: 'Amazing Video Title 6',
52     channel: 'Channel Name 6',
53     views: '750K',
54     uploadTime: '5 days ago',
55   },
56   // Add more video objects as needed
57 ];
58
59 // Generate video cards
60 const videosContainer = document.querySelector('.videos');
61 videoData.forEach((video) => {
62   const videoCard = `
63     <div class="video-card">
64       <div class="thumbnail">
65         
66         <div class="video-duration">${video.duration}</div>
67       </div>
68       <div class="video-info">
69         <div class="channel-icon"></div>
70         <div class="video-details">
71           <h3 class="video-title">${video.title}</h3>
72           <p class="channel-name">${video.channel}</p>
73           <p class="video-stats">${video.views} views • ${video.uploadTime}</p>
74         </div>
75       </div>
76     </div>
77   `;
78   videosContainer.insertAdjacentHTML('beforeend', videoCard);
79 });
80
```

(D) Execution Commands

To run this project locally:

1. **Clone the repository:** `git clone https://github.com/HADESOO7/YT-clone.git`
2. **Launch:** Open index.html in any standard web browser.
